

Team Kiwi

Playlist Party

Startup 7 Report

Founder Contributions

- ***Sam McGuire***
 - Implemented search function and client credential authentication.
- ***Dom Carnevale***
 - Finished updating the server functions relating to the previously planned out HTTP routes to interact with the project.
 - Was responsible for planning all HTTP routes.
- ***Jon Bailey***
 - Wrote report and proofread work of other founders.
- ***Nick Cummings***
 - Wrote reset database, updated ID objects, and wrote the following database functions:
 - *getplaylist*
 - *getplaylistdata*
 - *getplaylistitem*
 - *getplaylistitemdata*
- ***Michelle Ko***
 - Assisted with Spotify API Querying.
- ***Jake Magier***
 - Assisted with Spotify API Querying.

Issues

- User cannot edit their account info because the relevant server side functions couldn't be created in time.
- Server function for adding a new playlist isn't functioning properly, didn't have enough time to fix it.

Cut Features

- As stated in the startup 6 report, the following features have been cut:
- User cannot change their password because there is no value for password for a user in the database and there is no function to log in.
- User will not be able to connect their outside accounts to the app, did not have time to provide functionality with outside apps aside from Spotify.
- User will not be able to recover playlists if transferring accounts.
- User will not be able to edit playlists, only create them.
- User can no longer switch accounts.
- Friends list does not exist.
